

Instructions for Using LJ-3020 Wood Glue LJ-3021 (10 pack)

1. Remove the red syringe barrel cap by pushing to the side and twisting. Install the needle with a twisting motion (this locks the needle into the barrel).
2. With the rubber cap on the needle, place one finger on the end of the needle to hold in place, and with a quick motion insert the plunger into the end of the barrel until it seats in the rubber stopper.
3. Bend the needle if desired (use care not to kink or break needle). Remove needle cap and apply glue. Always keep cap on when not using the syringe.
